

AUTOZYME™ ENA

Anti-Ro (SS-A) Well Pack

- **Simple and adaptable methodology**
- **Consistent interpretation of results**
- **Flexible - build your own profile with other AUTOZYME™ ENA products**
- **Uniform - identical incubations**
- **Detects antibodies to 60, 54 and 52 kDa proteins**

● **Indication**

AUTOZYME™ ENA Anti-Ro antibodies well pack is a sandwich immunoassay for the detection of antibodies to Ro antigen in human serum or plasma.

● **Summary and explanation of test**

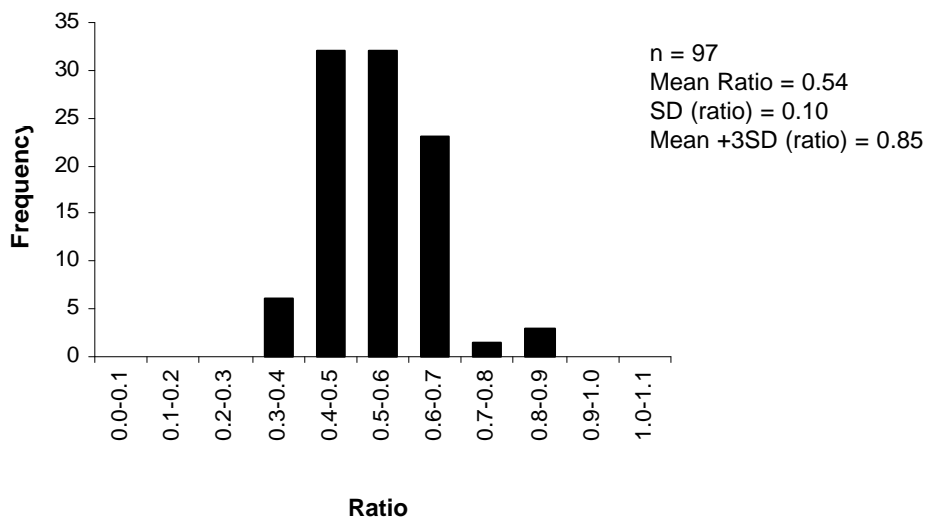

The AUTOZYME™ ENA method employs a unique antigen-coated microwell technology, which is ideal for the batch-screening of large numbers of samples for a range of auto-antibodies. The method utilises a non-competitive sandwich enzyme immunoassay system and is identical for all six antigens:

Ro (SS-A), La (SS-B), Sm, Sm/RNP, Jo-1 and Scl-70.

Anti-Ro antibodies appear as a clinical indication in 70-80% of patients with Sjögren's syndrome and 30 - 40% of patients with systemic lupus erythematosus (SLE).

This product must be used in conjunction with the AUTOZYME™ ENA bulk pack (Catalogue No: Z1000).
